FITT RESOURCES CORPORATE PROFILE

[www.fittresources.com.au](http://www.fittresources.com.au)

# *...and we are fitt...*

Fitt Resources specialise in the supply of premium mechanical engineering products, parts and servicing, for rotating and static equipment, across a range of industrial activities.

We deliver “tank to tank” solutions that reduce whole of life costs through improved equipment efficiency and reliability, reduced energy consumption and downtime.

Our internationally accredited product portfolio – including pumps, composites, filtration and sealing devices – is complemented by our comprehensive range of engineering service solutions.

Our capabilities span all cycles – from new builds, life extension projects and plant upgrades through to general maintenance, waste management and site standardisation.

We support our core business with superior service and professional support. This includes annual maintenance, onsite service support and repairs, and asset management expertise.

Our dynamic team is committed to helping clients better manage risk, improve operational efficiency and reduce environmental impact through a process of continuous improvement.

# ...for your business!

## premium products

As a trusted distributor, our reputation is only as good as the products we represent – one of the many reasons Fitt Resources is so passionate about product quality.

Our product range is constantly growing and evolving in line with emerging customers needs and industry trends.

## specialist service

More than just product experts, Fitt Resources is a full service supply partner with the shared objective to increase the mean time between repair (MTBR) of plant equipment and reduce the total cost of ownership.

Our dedicated service team specialise in a range of refurbishment, fabrication and engineering tasks, working in support of our tank-to-tank system review approach to deliver long-term equipment reliability and guaranteed customer satisfaction

## certified quality

Fully ISO 9001 & AS 4801 compliant, we pride ourselves on a long legacy of quality performance and reliability. Our approach is one of continuous improvement – both for our customers and our business – and we uphold adherence to quality as one of our key performance measurement standards.

## a great fit for your business

Fitt Resources are independent product experts and industry specialists. We are a dynamic team with a strong knowledge of our products, local protocols and broader industry influences.

Our reputation is built on our proactive attitude and flexible approach. Responsive to client needs and market changes, we deliver engineered solutions and service capabilities in support of our customers improved performance goals.

*Our goal is to become the respected supplier partner to industry, by offering quality, innovation and reliability across a growing range of products and services.*

# product...

*High performance service relies on high performance products. As a trusted distributor, our reputation is only as good as the products we represent – one of the many reasons Fitt Resources is so passionate about product quality.*

We offer a selection of premium products for specialised solutions to a range of industry sectors. With a strong focus on environmental management, many of our brands are already certified to ISO14001:2004. We honour all manufacturer warranties and work with every customer to ensure they get the right product, at the best price, within the right time.

## **pumps**

We offer a selection of premium pumps and pumping solutions for a broad range of industry sectors and can supply pumps for a variety of applications, from general industry through to high end boiler feed and specialty installations. With a strong focus on quality management, many of our pump partnerships have internationally certified quality systems. We also supply Australia's most comprehensive range of premium dewatering equipment, designed for use in a wide variety of applications.

## **sealing**

Increasing plant efficiencies by increasing sealing performance, we offer a range of sealing solution products to enhance operating conditions and dramatically increase mechanical service life. Our key supply partner AW Chesterton offers a comprehensive range of industry specific product solutions.

## **filtration**

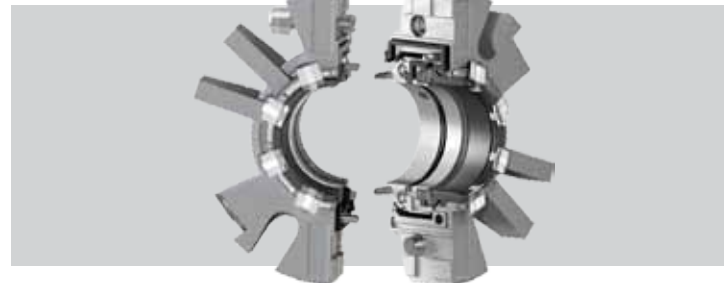

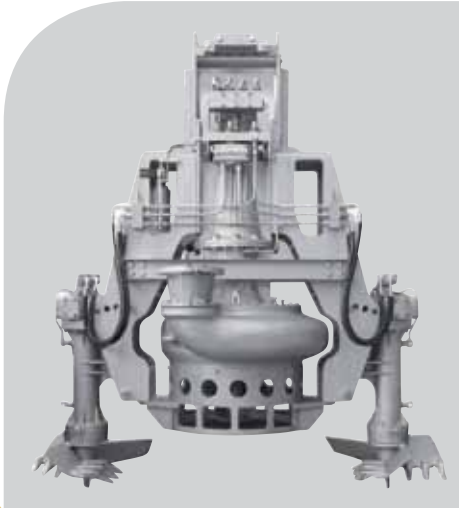

We represent a range of innovative and adaptable systems that can be used in a variety of separation and micro-filtration applications across key industrial markets. Solutions include pre and post reverse osmosis treatment, seawater intake, desalination and waste treatment.

## **composites**

Our advanced composite products are engineered to protect equipment against abrasion, corrosion, erosion and chemical attack. Innovative polymer and composite technology treatments offer long-term performance by protecting critical equipment in a broad range of applications.

# *industry...*

## **water and sewerage**

We are involved in all aspects of desalination, sewage treatment, bulk water handling and transfer.

We specialise in a range of equipment from pre filtration and micro filtration through to pumps and valves. We deliver a range of services from the complete supply of new installations and equipment through to service and maintenance for existing equipment. This includes major water refurbishments of regional assets as well as concrete remediation and pump station management. We add value through power reduction programs and equipment reliability improvements.

## **pulp and paper**

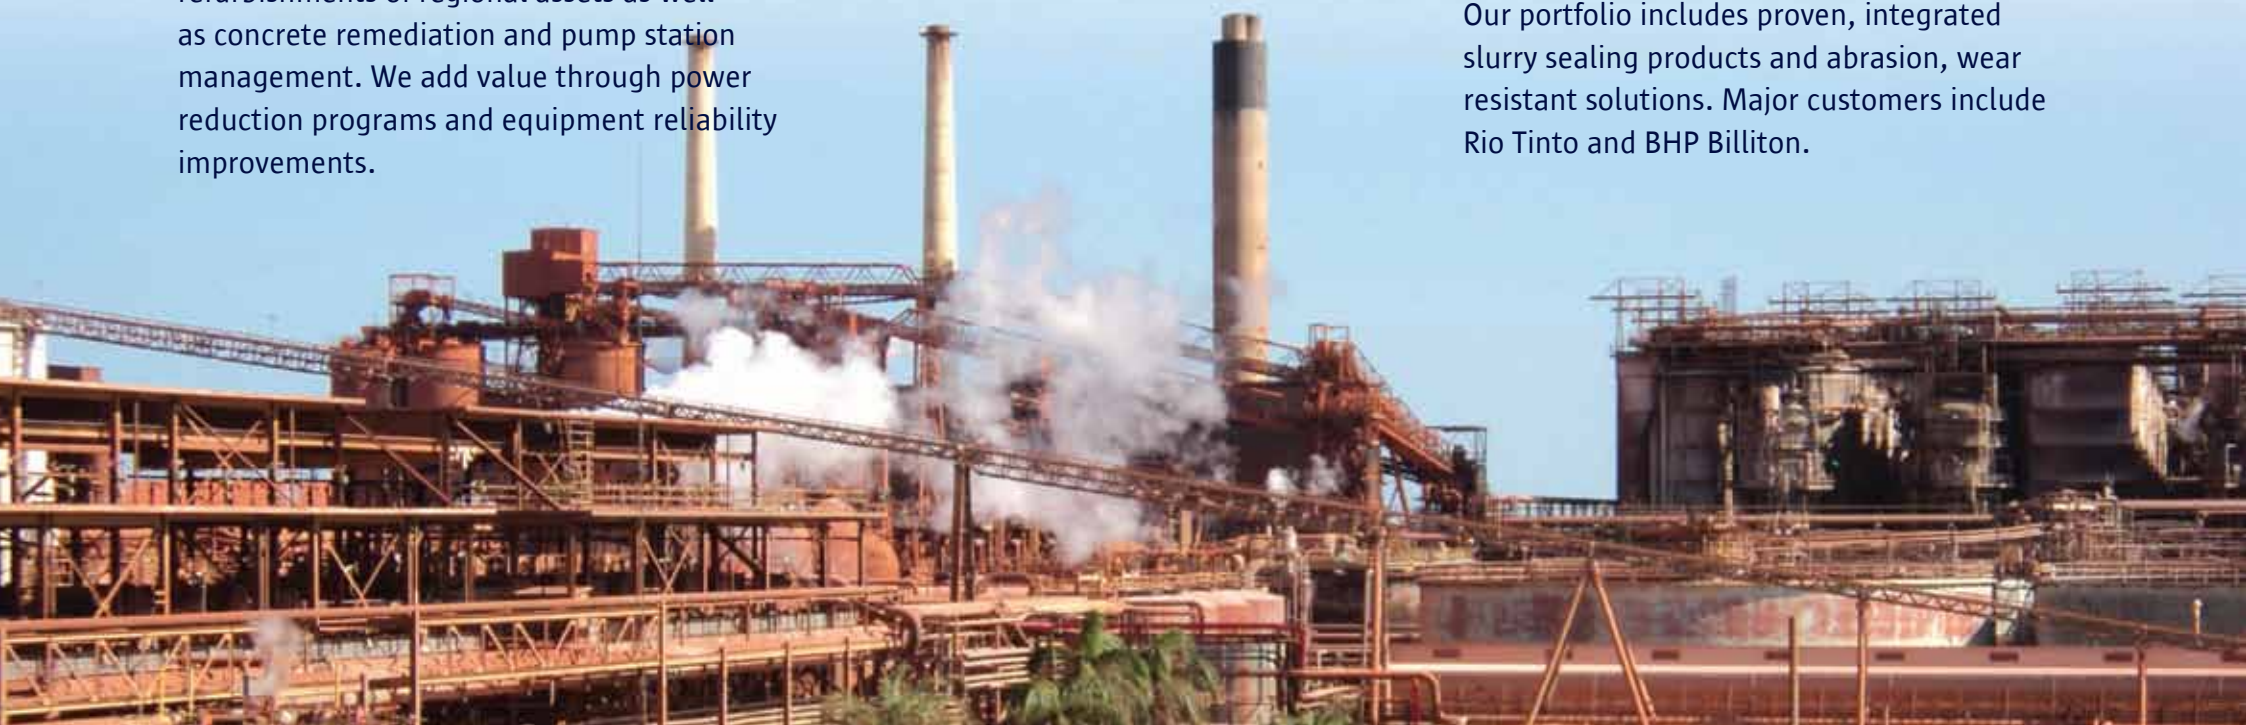

We understand the global economic pressures facing the industry due to cheap imports, the high Australian dollar and the increased costs of manufacturing. We help to increase the availability and reliability of key equipment through product standardisation and commercial supply agreements, and by reducing the overall costs of inventory and acquisition.

## **mining and mineral process**

with an understanding of current industry challenges, we work with key personal to support plant wide initiatives. We offer a complete range of services to help lower the cost of ownership of plant and equipment, including water and power reduction programs, water treatment solutions, product standardisation and inventory programs, along with training support.

Our portfolio includes proven, integrated slurry sealing products and abrasion, wear resistant solutions. Major customers include Rio Tinto and BHP Billiton.

### **defence and marine**

We provide specialist products, project management and multidisciplinary engineering services to government and industry. We specialize in the supply and manufacture of system pipework, structural steel fabrication, and equipment installation, overhaul and upgrade for pumps, valves and other rotating equipment. We also offer ongoing system maintenance and servicing.

### **oil, gas and refining**

We deliver a range of products engineered and certified to API standards. Our service covers pumps, fans, compressors, valves and heat exchangers – our goal to return increased reliability and operational efficiency at all level. We offer a fugitive emission solution to meet ever increasing global regulations.

### **power generation**

We provide a broad range of products and services related to static and rotating equipment. We understand key reliability drivers and offer product and services to exceed these requirements. We have extensive experience with key equipment, such as pumps, valve, heat exchangers, instrumentation and coal handling

### **general industry**

We work with a broad range of industries in the areas of water reduction and management; equipment servicing; product supply and training; inventory management and procurement solutions.

# *servicing*

*More than just product experts, Fitt Resources is a full service supply partner with the shared objective to increase the mean time between repair (MTBR) of plant equipment and reduce the total cost of ownership.*

We specialise in all aspects of pump and valve refurbishment, pipe work fabrication and associated engineering tasks, with specialist experience across key industry segments.

We support a tank-to-tank system review approach to deliver long-term equipment reliability and guaranteed customer satisfaction.

More than simple repair and service, our goal is to investigate potential design and material upgrades in order to improve efficiencies and increase asset life and reliability.

With an experienced team of project managers, engineers, technical and trade specialists, we offer a comprehensive workshop facility plus a fleet of fully equipped service vehicles for 24/7 onsite support. This includes onsite servicing of regional assets through our comprehensive Regional Servicing Division.

Our skilled service team offers rigorous after sales support – on hand to resolve issues, repair products, offer technical advice and provide training. Our well equipped service

workshop offers a complete range of servicing capabilities – including a fully integrated blasting room and pump testing rig.

On every project we work closely with customers to minimise equipment downtime and achieve critical lead times.

## **Turbo Machinery**

We service and supply engineered high speed turbo machinery.

Including turbines, fans, multi stage boiler feed pumps & compressors.

# *service centres*

## **Reliability Centre**

Located in Lisarow in NSW, the FITT Resources Reliability Centre is a fully integrated 2,500m<sup>2</sup> rotating equipment workshop that features submersible pump testing, service and overhaul facilities, along with rotating element balancing equipment. The workshop also features a horizontal and vertical borer, blasting and coating equipment, a 10-tonne lifting capacity, and a close loop test rig.

## **Queensland Service Centre**

Located in Gladstone and the heart of Queensland mining and manufacturing industries, the FITT Resources Queensland Service Centre provides on-site services across the region, including shut down maintenance, equipment assessment, condition monitoring and re-engineering. Our services include the overhaul, servicing and repairs of high-end machinery and equipment.

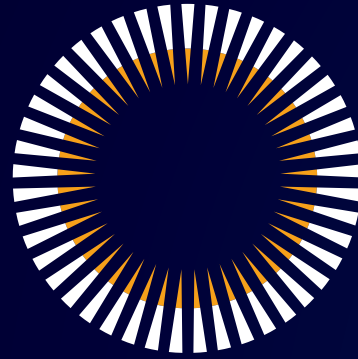

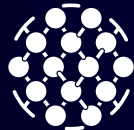

- pump refurbishment and overhaul (repair, upgrade, commission and testing)
- submersible pump overhauls
- on-site servicing
- valve, flange & heat exchanger programmes
- mechanical seal refurbishment
- laser alignments for rotating equipment
- pipe spooling fabrication and installation
- valve repair, upgrade, commission & testing
- condition monitoring
- heat exchanger repair, upgrade, commission & testing
- flow system equipment and pipework
- white metal bearing manufacture or refurbishment
- mechanical equipment installation and removal
- plant shutdown and decommissioning
- onsite and offsite repair
- submersion pump overhaul
- water industry service
- turbo machinery
- boiler feed pumps
- compressors
